EXP-4

4. The online train reservation system allows users to search for trains by route, date, and time, and view available seats and classes. Users can register, log in, and manage their reservations through a personal dashboard. The booking process involves selecting seats, entering passenger details, and making secure payments via an integrated payment gateway. Admins can manage train schedules, seat availability, and user accounts through a comprehensive admin panel. Users receive booking confirmation emails and can view their booking history and print tickets from their dashboard. The website features real-time seat availability updates and is fully responsive for seamless use on all devices

1. HTML Code

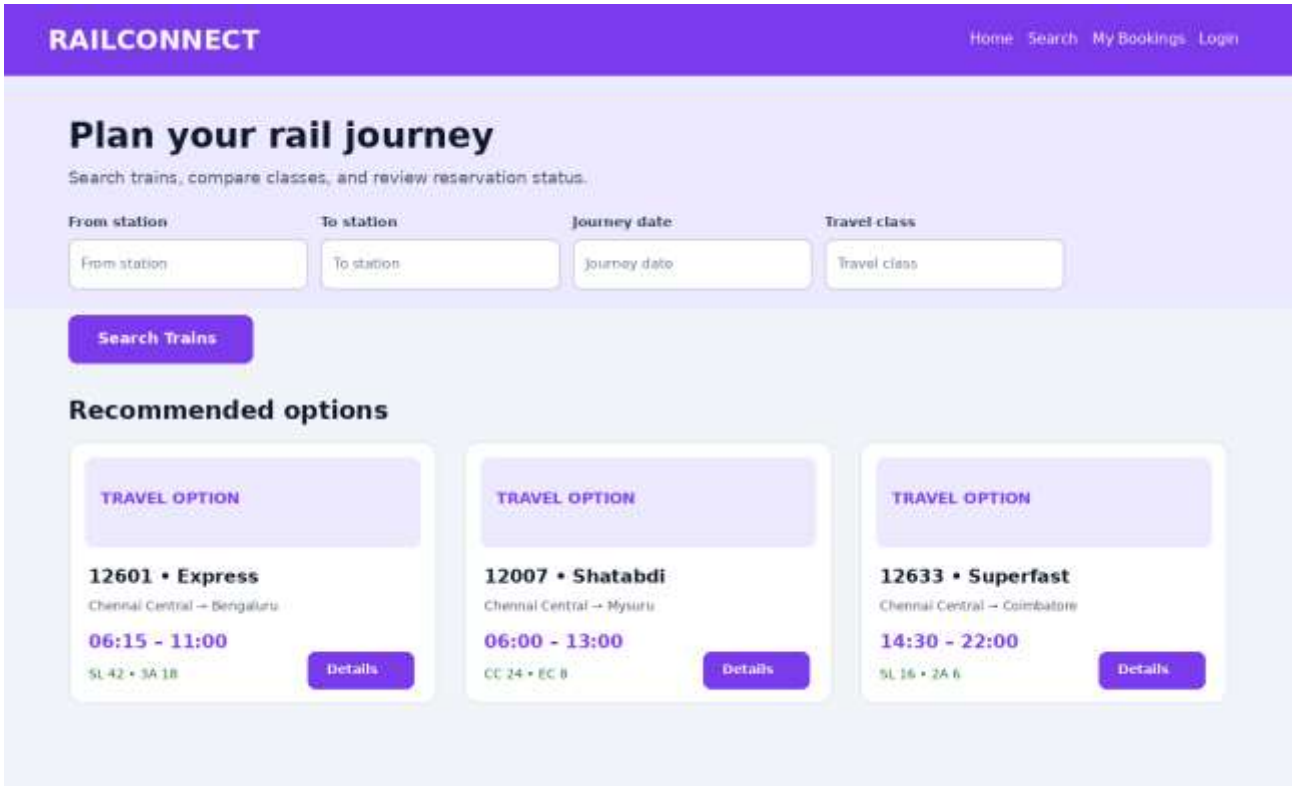

Save the following code as index.html. It includes HTML, CSS, and a small JavaScript search interaction. Replace sample records with real data when connecting a backend.

```
