EXP-10

10. StyleHub, a premier online fashion retailer, introduces its comprehensive e-commerce platform designed to cater to fashion enthusiasts. The website offers an extensive collection of clothing, footwear, and accessories for men, women, and children, with categories such as casual wear, formal attire, and seasonal collections. Key functionalities include user registration and login, advanced search and filtering options, detailed product descriptions with high-resolution images, customer reviews, and size guides. The platform supports secure payment methods, order tracking, and an easy return and exchange policy. Customers can create wish lists, receive personalized style recommendations, and enjoy exclusive online discounts and flash sales. StyleHub aims to provide a seamless and enjoyable shopping experience, keeping users up-to-date with the latest fashion trends.

The core of an online shop is the product catalogue and the cart. The users browse products which are grouped in categories and add the desired ones to the cart. Next, there is transaction handling, which in its simplest form consists in the order being sent via e-mail to the seller, but most often it takes the whole buying process through separate order statuses.

Functionalities

- Search and filter products by category, style, size and maximum price.
- View the product catalogue with price, sizes and stock or flash-sale status.
- Add products to the cart, remove them, and see the running total.
- Place an order and follow it through order statuses in My Orders.
- Download or print the order history.
- Responsive layout for desktop, tablet and mobile.
- Backend features (login, payment gateway, confirmation emails, admin panel) are to be connected to this frontend.

1. HTML Code

Save the following code as index.html. It includes HTML, CSS, and a small JavaScript search, cart and order interaction. Replace sample records with real data when connecting a backend.
