EXP-12

12. InsureEasy, a cutting-edge online insurance management platform, is designed to streamline the insurance process for users. The website allows customers to easily compare and purchase various insurance policies, including health, auto, and home insurance. Key functionalities include user registration and login, a policy comparison tool, detailed policy descriptions, and secure online applications. Users can view and manage their existing policies, make premium payments, and file claims through an intuitive dashboard. The platform also provides personalized recommendations based on user profiles and needs, and sends automated reminders for policy renewals and upcoming payments. InsureEasy aims to enhance user convenience and provide comprehensive support for all insurance-related needs.

This system maintains information of managers who can deal with agents and customers. In existing system, the manual procedure is followed where records are used to maintain data which is a time taking process and requires manpower and calculating commissions dues. Etc are done manually. This system is where agents send SMS alerts to the policyholder to remind them before and exceed the data of due.

Functionalities

- Search policies by insurance type, minimum cover, maximum premium and feature.
- View health, auto and home policies with cover amount and yearly premium.
- Compare up to three policies side by side and apply for a policy.
- Pay premiums, and send SMS reminders for policies that are due or overdue.
- Download or print the list of policies.
- Responsive layout for desktop, tablet and mobile.
- Backend features (login, payment gateway, confirmation emails, admin panel) are to be connected to this frontend.

1. HTML Code

Save the following code as index.html. It includes HTML, CSS, and a small JavaScript search, compare and premium payment interaction. Replace sample records with real data when connecting a backend.
