15. EasyToll, an advanced online toll payment system, simplifies the process of managing toll fees for drivers. The website allows users to register and log in to access their toll account, where they can view and pay outstanding toll charges from various toll gates. Key functionalities include real-time toll balance updates, automatic payment options, and the ability to add or update vehicle details. Users can view detailed transaction history, set up recurring payments for frequent routes, and receive notifications for upcoming toll charges. The platform also supports secure payment methods and provides a user-friendly interface for managing toll accounts and reviewing payment summaries. EasyToll aims to enhance the convenience of toll payments and reduce wait times at toll booths.

This website should help the user to pay toll in advance therefore not to wait in queue while travelling.

Functionalities

- Search toll plazas by highway, vehicle type, journey type and travel date.
- View toll fees for each plaza based on the chosen vehicle and single or return trip.
- Pay toll in advance from the wallet and see the balance update instantly.
- Add money, update vehicle details, and switch auto-pay on or off.
- Download or print the transaction history.
- Responsive layout for desktop, tablet and mobile.
- Backend features (login, payment gateway, confirmation emails, admin panel) are to be connected to this frontend.

1. HTML Code

Save the following code as index.html. It includes HTML, CSS, and a small JavaScript search, payment and balance interaction. Replace sample records with real data when connecting a backend.
